LipoLite™

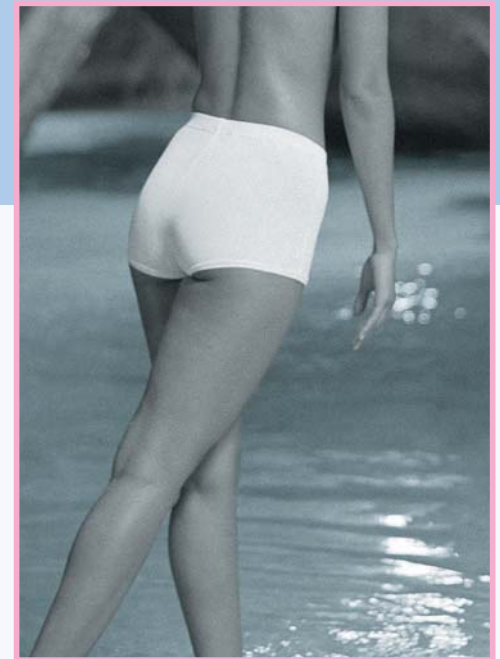

NON-SURGICAL LIPOSUCTION
& CELLULITE IMPROVEMENT

What is the LipoLite™ procedure?

LipoLite™ is a non-surgical, lipo-contouring, non-invasive “liposuction-like” program that can shrink down unwanted, localized collections of unwanted fat (of the thighs, buttocks, hips, waist, “love-handles”, arms and calves), as well as improve the appearance of cellulite and firm up loose skin. As the name LipoLite™ implies (liposuction done lightly... liposuction meets cellulite), is the first non-surgical program that can predictably contour and shape your figure by reducing localized fat collections and improve the appearance of “lumpy-bumpy”, cottage cheese like skin and tighten skin laxity.

How does the LipoLite™ program work?

LipoLite™ is a coordinated series of 16 treatments performed twice weekly over 8 weeks. Areas of unwanted fat, cellulite and loose skin are treated with a device called the VelaSmooth™. This LipoLite™ device is an FDA cleared medical device that delivers Radiofrequency and Infrared Light energy into the fat and cellulite. The Radiofrequency and infrared energies stimulate the safe, “natural” and localized metabolic breakdown of fat and the smoothing and tightening of cellulitic skin. The fat reduction, cellulite smoothing and skin tightening results can often be amplified and enhanced by the addition of LipoLite™ mesotherapy and carboxytherapy. Some LipoLite™ certified physicians and practices will offer these needle based modalities in their

LipoLite™ program. LipoLite® Mesotherapy and Carboxytherapy involve the micro-injection or non-needle propulsion of chemically active compounds into the regions of fat and cellulite to biochemically stimulate fat breakdown and smoothen skin. Each LipoLite™ treatment lasts for approximately 45 minute and there is minimal to no discomfort. No anesthetic cream or medication is required. You may return to activities immediately after each LipoLite™ treatment. The LipoLite™ program is very safe and the risk of a complication is exceedingly low.

Am I a good LipoLite™ candidate?

Any patient with diet and exercise resistant collections of unwanted fat ,cellulite and loss of skin elasticity should benefit from the LipoLite™ program. LipoLite™ patients can be light or dark skinned, heavy or light in weight. Those patients with unrealistic expectations, excessive obesity, excessive skin laxity, patients with pacemakers, seizure disorders and those who may be pregnant are not good LipoLite™ candidates.

Is there any dietary or exercise requirement?

Unlike many localized or generalized weight loss and cellulite programs, the LipoLite™ program does NOT require any special diet, exercise or augmented fluid intake. The LipoLite™ program just requires your presence for the full 8 week program.

What areas might be treated with LipoLite™?

Unwanted fat of the thighs, hips, buttocks, abdomen, love-handles, bralines, arms and calves are body regions that usually respond well to the LipoLite™ program. The LipoLite™ treatments can be used to smoothen and firm any cellulitic skin on the body.

What results might I expect from LipoLite™?

Average fat reductions can total 1.5- 9cm of circumferential shrinkage over the 8 week program. Cellulite improves an average of 40%-80% and skin will generally tighten significantly.

How Long will my LipoLite™ contouring last?

As long as you maintain a consistent body weight after completing the LipoLite™ program, the contour and lipo-reduction improvements should last a very long time. Cellulite and loss of skin elasticity, unlike fat, should be viewed as chronic disease, like high blood pressure and diabetes and, as such, will require a maintenance cellulite “booster” treatment every 4-6 weeks.

Is the LipoLite™ program safe?

The LipoLite™ is a very safe and effective way to deliver lipo-contouring, lipo-reduction results, cellulite improvement and skin tightening. Unlike surgical liposuction, there are no incisions, no surgery, no anesthetic, no scars and no recovery.

What is the cost of LipoLite™?

The cost of LipoLite™ varies depending upon the number of large and small anatomical zones that you would like treated. LipoLite™ prices will also vary between cities and individual physicians practices, but is generally a fraction of the cost of surgical liposuction. Some LipoLite™ certified physicians will offer value added pricing if you decide to do Liposuction, tummy tuck or body lift within a few years of the LipoLite™ program.
