## What is the Pan G™?

The Pan G™ is a patented, non-surgical, office based series of treatments that produces and simulates many of the rejuvenating effects of a facelift. In essence, the Pan G™ is the "facelift in a box" procedure delivered without a knife. The Pan G™ was developed by Dr. R. Stephen Mulholland, MD an internationally renowned cosmetic plastic surgeon, who specializes in facelift surgery and is the co-developer of the popular FotoFacial™ procedure.

## How is the Pan G™ performed?

The Pan G™ is a series of office based treatments that apply RadioFrequency energy, high voltage galvanic electrical current, high frequency ultrasound and dermatophoresis to produce "facelift like" effects upon the soft-tissue envelope of the face and neck. The Pan G™ patient must commit to 20 treatments over 10 weeks to achieve these facelift effects. Each treatment lasts less than one hour and patients can usually return immediately to normal activities. During the program, Pan G™ Botox and injectable fillers are added to the necessary facial regions. Some Pan G™ patients (The Pan G Plus™) will also be receiving the FotoFacial RF™ treatments to improve skin color, wrinkles and tone. For these patients, the Pan G™ PLUS program will last 16 weeks.

## Who is a Pan G™ non-surgical facelift candidate?

Pan G™ non-surgical facelift candidates include all those individuals who desire to achieve some of the effects of a surgical facelift but (i) are too young (age 20-35 yrs) to entertain a more invasive procedure, but want to combat, through a prophylactic strike, the early visible droopiness of the brow, cheeks and neck; (ii) are middle aged patients (age 35-50 yrs) who have moderate signs of facial aging and do not feel that it is the right time in their life for a facelift, but will consider cosmetic facial rejuvenation surgery at the some time in the future; (iii) older Pan G™ patients (age 50-65yrs) who have marked facial aging, but do not want a surgical facelift and will

## Results

### BROW AND EYELID LIFTS

### CHEEK AND LOWER LID LIFTS

### JOWL AND NECK LIFTS

consider the Pan G™ lift as they desire to achieve the greatest degree of facial rejuvenation possible without surgery; (iv) lastly, patients who have undergone cosmetic surgery of the face who want to maintain indefinitely, the lift effect that surgery delivered indefinitely through a post-operative Pan G™ lift. Patients would not be a candidate for the Pan G™ facelift if they have a pacemaker, suffer from cataracts or have unrealistic expectations.

## How is the Pan G™ Facelift Effect Accomplished?

The Pan G™ combines several patented treatments during the bi-weekly visits to accomplish the facelift effect. High voltage electrical current, isometric resistance, RadioFrequency energy and high frequency ultrasound treatments result in youthful rejuvenation of the skin and a "tightening" of the facial soft-tissue envelope with an elevation of the brow, cheek, and neck to mimic the appearance of a surgical brow-lift, eyelid contouring, cheek-lift, jowl-lift and neck-lift.

## How long will the Pan G™ Facelift effects last?

After the 2-3 months of the Pan G™ non-surgical facelift treatment, the patients must commit to a maintenance program to preserve the facial elevation effects. The coordinated, affordable maintenance program calls for visits to the office once every 4-6 weeks.

## Does the Pan G™ hurt and are there any risks?

The application of the High Voltage electrical current, Radiofrequency energy and high frequency ultrasound results in strange sensations and a tolerable discomfort for most patients that they quickly adapt to. Topical anesthetic cream is offered to those Pan G™ patients who require the FotoFacial RF™ component to their enhancement program.

## What results might I expect from the Pan G™ non-surgical facelift?

Studies show that the average patient achieves 4-8 mm of brow elevation and upper eyelid improvement. The cheeks, midface and lower lids are elevated and tightened by 30-40% and the Jowls and Neck are tightened by 20-30%. Most patients report that they look between 5-7 years younger.

## What if I want a real Facelift in the Future?

The Pan G™ is designed to accommodate surgical facelifts at any time. Most physicians who perform the Pan G™ non-surgical facelift within their practice, will take a significant amount of your original investment in the Pan G™ service and apply that against your surgical facelift. This approach gives the Pan G™ patients all the benefits of a non-surgical facelift rejuvenation immediately and the economic benefit of value added pricing when they may be ready for a surgical facelift at some time in the future.
